New biologically active complex comprising NR6 and cardiotrophin-like-cytokine, for facilitating proliferation, differentiation and/or survival of a cell.

Claim 29; Page 106-107; 123pp; English.

The present invention relates to a biologically active complex comprising a haemopoletin receptor, NR6 and cardiotrophin-like cytokine (CLC). The complex is useful in the manufacture of a medicament for the treatment and/or prophylaxis of a subject, as it is involved in facilitating proliferation, differentiation and/or survival of a cell. The complex or its components have neurotrophic activity. The present sequence is murine haemopoletin receptor, NR6 protein, encoded by NR6 DNA

                                                                                                                                                                                                                                                                             This sequence represents human PRO327 (UNQ288), a 46.3 kDa protein (pI 9.42) encoded by the novel cDNA clone DNA38113 (see AAX87256).

Amplification of DNA38113 occurs in various lung and colon tumours and cell lines, suggesting a significant role in tumour formation and growt Antagonists (e.g. antibodies) directed against PRO327 are expected to have utility in cancer therapy. The invention identifies 14 genes (see AAX87254-67) that are amplified in the genome of tumour cells. Such amplification is expected to be associated with overexpression of the gene product and to contribute to tumorigenesis. The encoded proteins (see AAX06477-90) may be useful targets for the diagnosis and/or treatment (including prevention) of certain cancers, and may act as predictors of the prognosis of tumour treatment. Antibodies that bind t proteins are claimed and used in claimed cancer diagnostic kits
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        29-APR-1998

transmembrane proteins used therapeutically. The PRO proteins have cytostatic, anti-inflammatory, anti-proliferative and immunosuppressive activity. The proteins and polynucleotides can be used in therapy, identification of homologues, raising antibodies and design of probes and primers. They can be used in a range of diseases related to proteins that they have homology with, e.g. a PRO protein having homology to complement proteins may be used in inflammatory responses
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        AAY17825 standard; protein; 422 AA.

The protein is predicted to following biological activities: cytokine, cell proliferation/differentiation, immune stimulating or suppressing haematopoiesis regulating. The U4 protein can be used to treat in disorders and deficiencies, autoimmune disorders, allergies, cance myeloid or lymphoid cell deficiencies and platelet disorders

The membrane-bound proteins can also be employed for screening of potential peptide or small molecule inhibitors of the relevant rereptor/ligand interaction. Anti-PRO antibodies are useful for the affinity purification of PRO from recombinant cell culture or natural sources

The specification describes novel polypeptides designated PRO201, PRO202, PRO1265, PRO344, PRO343, PRO347, PRO357, PRO715, PRO1017, PRO509, PRO6059, PRO6053, and PRO6082. These genes are amplified in the genome of tumour cells. The polypeptides are believed to contribute to tumourigenesis. The polypeptides are useful target for the identification of certain cancers, and may act as predictors of the prognosis of tumour treatment. Antibodies against these polypeptides are useful in the treatment and diagnosis of neoplastic cell growth and proliferation in

protein.

```
CC describes a complex comprising a NNT-1 protein and a CLF-1 and/or CC scNTFRalpha, protein. The NNT-1/CLF-1 complex is used to modulate activity of the sCNTFRalpha/gp130/LIFRbeta receptor complex, or to induce CC phosphorylation of the tyrosine of gp130 and LIFRbeta, particularly where CC cells expressing the receptor complex are in the central or peripheral carrous system, in neurons implicated in neuro-muscular function or in CC skeletal muscle. The complex or antibodies are also used to decrease the survival, growth or proliferation of tumour cells or to facilitate the proliferation and/or inhibit differentiation of cells stocks. The complex CC is also used to modulate activity of the gp130/LIFRbeta receptor or cells cexpressing that receptor, particularly those cells implicated in the CC immune, haematopoietic, nervous or reproductive system, the liver or CC skeletal muscle. Molecules of the invention may be used to prevent or treat neurodegenerative diseases including amyotrophic lateral sclerosis, CC parkinson's and Huntington's disease, to repair or regenerate nervous or may also be used to treat cancer, obesity and associated diseases, and to complex implantation, thrombosis, or retinal disease, particular CC retinal picmentosis, thrombosis, or retinal disease, particular
                                                                                                                                                                                                                                                                                                                                                                              Query Match

Also included are: (1) an isolated nucleic acid CC comprising: (a) at least 80% sequence identity to a nucleotide sequence that encodes; a PRO protein; (b) at least 80% sequence with any of 15 fully CC defined sequences of 957-3441 base pairs, given in the specification; or CC (c) at least 80% sequence identity to a full-length coding sequence of a CC DNA deposited under ATCC Accession No. 209526, 209527, 209528, CC 209530, 209523, 209492, 209532, 209531, 209529, 209527, 209528, CC 209530, 209523, 209492, 209532, 209531, 209529, 209527, 209518, CC 209521 or 209619; (2) a vector comprising the nucleic acid; (3) a host CC cell comprising the vector which, when cultured under conditions suitable CC for expression of the PRO polypeptide, produces the PRO protein; (4) a CC chimeric molecule comprising PRO fused to a heterologous amino acid CC sequence; and (5) an anti-PRO antibody. The methods and compositions of the present invention are useful for the diagnosis and treatment of CC immunodeficiency syndrome), cancer, atherosclerosis, inflammatory CC disease, diabetic complications, cardiac injury and organ failure. The CC antibodies can also be used in the different screening, therapeutic and CC biological assays. The present sequence represents a PRO protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Query Match

The invention relates to a human secreted and transmembrane polypeptide (PRO) and the polynucleotide encoding it. The PRO polypeptide or polynucleotide is useful in pharmaceuticals, diagnostics, biosensors or bioreactors. These are particularly useful for detecting or treating

Claim

Fig

14;

173pp;

English.

New secreted and transmembrane polypeptides (e.g. PRO241, for use in pharmaceuticals, diagnostics or bioreactors, particularly for detecting or treating e.g. cancers, infertility or acquired immunodeficiency syndrome in mammals.

CC essential process in embryonic development and plays a critical role in CC many diseases and conditions in humans. Two genes found to be regulated CC during bone and cartilage formation are the cytokine receptor-like factor CC (CLF-1 or CLRF-1), which is specifically regulated during mesenchymal CC ell differentiation, and matrix metalloproteinase 23 (MMP23), which is generations comprising a number of expression of a number of genes, CC computer program for ranalysing levels of expression of a number of genes, CC compositions comprising a number of antagonists or agonists of the genes CC and methods for determining whether a subject has, or is likely to CC develop, a disease related to bone or cartilage resorption or formation, CC for determining the effectiveness of a treatment intended to stimulate CC bone or cartilage formation or resorption, for identifying a compound for CC cartilage formation possibly acting a disease related to bone or cartilage formation possibly acting as a cadherin or CD68 agonist or a CC cytokine antagonist. The methods and compositions are useful for CC diagnosing and treating disorders associated with bone or cartilage (costeoplas osteopertrusis, osteogenesis imperfecta, osteoporosis, osteoplas osteopartrusis, osteogenesis imperfecta, osteoporosis, CC osteoplas osteopartrusis, osteogenesis imperfecta, osteoporosis, CC immobilisation or sex hormone deficiency, bone and cartilage loss caused CC by an inflammatory disease, rheumatoid arthritis, osteoarthritis and bone CC fractures. The sequence presented is the human CLF-1 protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Determining the difference between levels genes, useful for diagnosing and treating or cartilage formation or resorption such
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention discloses a method for determining the difference between the levels of expression of a number of, at least 500 genes, during bon or cartilage formation. The method comprises determining levels of RNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           18-APR-2002; 2002WO-US012149
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                from the genes to obtain levels of expression and comparing these to a set of reference levels for each of the genes. Bone formation is an
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         N-PSDB;

The invention relates to an isolated nucleic acid encoding a secreted/
CC transmembrane polypeptide (designated as PRO proteins). 15 PRO
CC polypeptides and their encoding polynucleotides are disclosed. Also
CC included are a vector comprising the PRO nucleic acid, a host cell
CC comprising the vector, a process for producing a PRO polypeptide (by
CC culturing the host cell under conditions for the expression of the PRO
CC polypeptide, and recovering the PRO polypeptide from the cell culture, an
CC isolated polypeptide having at least 80% amino acid sequence identity to
CC the PRO polypeptides, a chimaeric molecule comprising PRO fused to a
CC the PRO polypeptides, a chimaeric molecule comprising PRO fused to a
CC the PRO polypeptides, a chimaeric molecule comprising PRO fused to a
CC the PRO polypeptides, a chimaeric molecule comprising PRO fused to a
CC the PRO polypeptide sequence are useful as hybridisation probes,
CC in chromosome and gene mapping, in generating sense and antisense RNA or
CC DNA, in generating transgenic or knock-out animals which can be used in
CC the development and screening of therapeutically useful reagents, and in
CC gene therapy. The polypeptides may be used as molecular weight markers
CC for protein electrophoresis purposes. The PRO polypeptides and nucleic
CC acids may also be used for chromosome identification, and tissue typing.
CC gene therapy proteins are variously implicated in immune
CC disorders, inflammatory disease, organ failure, atherosclerosis, cardiac
CC injury, infertility, birth defects, premature aging, cardiac injury,
CC ALDS, cancer and diabetic complications. The present sequence represents
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New transmembrane polypeptides and polynucleotides useful for chromosome identification, tissue typing, gene therapy, in chromosome and gene mapping, or as molecular weight markers.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Eaton DL, Fc...

The methods compositions of the present invention are useful for the diagnosis and treatment of disorders such as inflammatory disease, again failure, atherosclerosis, cardiac injury, infertility, birth defects, premature aging, AIDS, cancer, diabetic complications and mutations in general. This is the amino acid sequence of a novel human secreted PRO protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New isolated PRO polypeptide and encoding nucleic acids, useful for the diagnosis and treatment of disorders such as inflammatory disease, atherosclerosis, cardiac injury, infertility, AIDS, cancer and diabetic

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       premature
                                                                                                                                                                                         This invention relates to a nucleotide sequence encoding an isolated secreted and/or transmembrane protein. The nucleotide sequences of the invention may have antiinflammatory, antiarteriosclerotic, cardiant, anti-infertility, anti-HIV, cytostatic and antidiabetic activities and may be used in gene therapy. The nucleic acids and polypeptides are useful for treating inflammatory diseases, organ failure, atherosclerosis, cardiac injury, infertility, birth defects, premature aging, AIDS, cancer, or diabetic complications. The nucleic acids are useful as hybridisation probes, in chromosome and gene mapping, and in generating antisense RNA or DNA. The polypeptides are useful as pharmaceuticals, diagnostics, biosensors or bioreactors. Both are useful in tissue typing. The present sequence represents a protein encoded by the nucleic acids of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  US2002142958-A1

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            CC The invention relates to an isolated PRO polypeptide having at least 80% CC amino acid sequence identity to and scoring at least 80% positives when CC compared to any of 15 fully defined sequences of 235-954 amino acids, CC given in the specification. Also included are: (1) an isolated PRO CC nucleic acid having at least 80% nucleic acid sequence identity to a CC nucleotide sequence that encodes PRO or its extracellular domain, and CC comprising any of 15 fully defined nucleotide sequences of 957-341 bp. CC given in the specification and deposited under ATCC accession number CC 209526, 209527, 209570, 209518, 209523, 209523, 209523, 209523, 209521, 209529, 209527, 209570, 209518, 209521 and 209619; (2) a vector CC comprising the PRO nucleic acid; (3) a host cell comprising the vector; CC (4) producing PRO polypeptides, comprising cutturing the cell for CC expression of the PRO polypeptides, comprising the PRO polypeptide from CC the cell culture; (5) a chimaeric molecule comprising PRO folypeptide from CC methods and compositions are useful for the diagnosis and treatment of CC disorders such as inflammacory disease, organ failure, atherosclerosis, CC cardiac injury, infertility, birth defects, premature aging, AIDS CC (acquired immunodeficiency syndrome), cancer, diabetic complications and CC mutations and compositions are useful for the compositions and compositions are useful for compositions and compositions are useful f

C;Comment: This is one of the short forms (Sla and Slb) of the human prolactin receptor eta-casein gene promoter activation, with Sla less effective than Slb. However, their lited COS-1 and HEK293 cells is due to rapid intracellular turnover of the receptor. #expe
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        prolactin receptor short C; Species: Homo ~--

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

TISSUE SPECIFICITY: Highest levels of expression observed spleen, thymus, lymph node, appendix, bone marrow, stomach placenta, heart, thyroid and ovary. Strongly expressed alfetal lung.
                                                                                                                                               stimulation by IFN-gamma, TNF-alpha and IL-6.

DOMAIN: The WSXWS motif appears to be necessary for proper protein folding and thereby efficient intracellular transport and cell-surface receptor binding.

SURFACE: COLOR TO CRUFI are the cause of cold-induced sweating syndrome (CISS) [MMI.272430]. CISS is an autosomal recessive disorder characterized by profuse sweating induced by cool surroundings (temperatures of 7 to 18 degrees Celsius). Additional abnormalities include a high-arched palate, nasal voice, depressed nasal bridge, inability to fully extend the elbows and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      맑
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          δ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                PubMed=15378723; DOI=10.1002/rcm.1604; Jin W.H., Dai J., Zhou H., Xia Q.C., Zou H.F., Zeng R.; "Phosphoproteome analysis of mouse liver using immobilized metafinity purification and linear ion trap mass spectrometry."; Rapid Commun. Mass Spectrom. 18:2169-2176 (2004).
                                                                                                                                                                                                                                               neonatal mice.
SUBUNIT: Forms covalently linked di- and tetramers. Forms a heteromeric complex with cardiotrophin-like cytokine (CLC); the CRLF1/CLC complex is a ligand for the ciliary neurotrophic factor receptor (CNTFR) (By similarity).
SUBCELLULAR LOCATION: Secreted (By similarity).
TISSUE SPECIFICITY: Widely expressed in the embryo. Not detected in the brain of adult mice.
DOMAIN: The WSXWS motif appears to be necessary for proper proteir DOMAIN: The WSXWS motif appears to be necessary for proper proteir
